EventHub

EventHub built with Next.js, TypeScript, Prisma ORM, and PostgreSQL, offers a modern and reliable platform for managing and attending events. Users can effortlessly browse upcoming events, purchase tickets, and receive confirmations securely. The admin dashboard enables organizers to efficiently create, update, and manage events, ensuring a smooth experience for both users and event administrators.
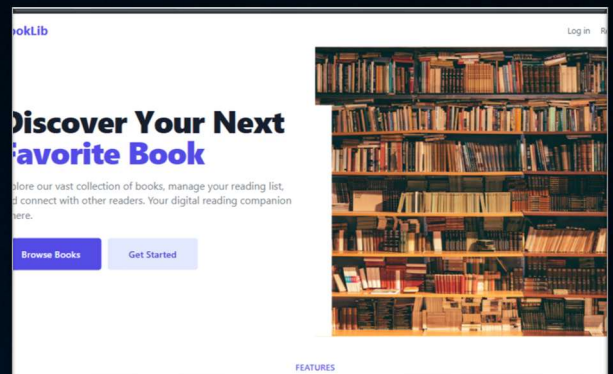

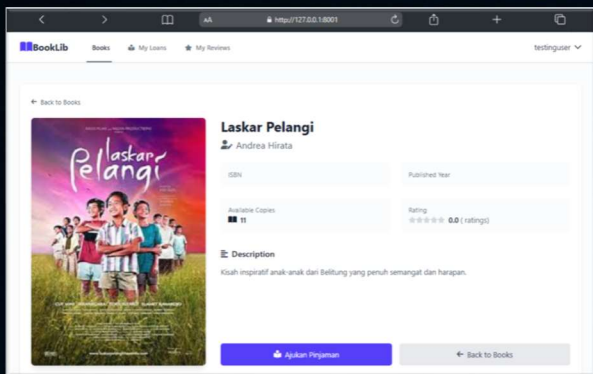

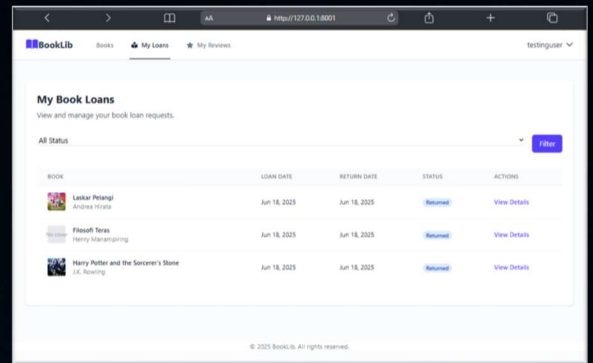

Tech Stack:

BookLib

BookLib is a modern library management system built with Laravel, MySQL, Tailwind CSS, Composer, and Artisan. Designed to streamline borrowing activities, it allows users to browse available books, submit loan requests, and share feedback through ratings and comments. Admins can efficiently manage book inventories, user data, and monitor loan activity in real-time via an intuitive dashboard—ensuring a structured and organized library experience.

MyNoteApp

MyNoteApp is a simple and intuitive note-taking mobile application built with React Native. It allows users to quickly add new notes, mark tasks as completed, archive important items, edit existing content, and delete notes when no longer needed. With its clean interface and smooth user experience, MyNoteApp helps users stay organized and focused on what matters

NoteWeb

As a final project for the Dicoding Frontend Developer training, I developed a note-taking website. Similar to common note-taking applications, this website allows users to create new notes, delete existing ones, search for specific notes, and archive them. Each note consists of a title, creation date, and content. The website includes a form for adding new notes with built-in validation and utilizes local storage to save user data
